

A 20x20 grid with orange dots forming a diamond shape. The dots are located at the intersections of the grid lines. The diamond shape is centered in the grid, with its widest part at the 10th and 11th rows, where there are 19 dots each. The number of dots decreases as you move away from the center towards the top and bottom edges of the grid. The top and bottom rows each contain a single dot at the 10th and 11th columns respectively. The overall shape is a symmetric diamond or rhombus.
